CAREER OBJECTIVE

Aspiring Software Engineer with expertise in Python, SQL, Machine Learning, and software development fundamentals. Skilled in building data-driven applications, NLP solutions, and database-integrated systems. Seeking an opportunity to contribute to innovative projects while continuously learning and growing as a technology professional.

SKILLS

- Programming & Fundamentals:** Python, SQL, Object-Oriented Programming (OOP), Data Structures
- Machine Learning:** NLP, Feature Extraction, Text Vectorization (TF-IDF, BoW), Supervised Learning, Scikit-learn
- Databases:** MySQL, MongoDB
- Soft Skills:** Adaptability, Problem-Solving, Team Collaboration, Analytical Thinking

PROJECTS

HeartSense: Heart Disease Prediction Web App
Machine Learning

October 2025 – May 2026

- Developed an end-to-end machine learning web application using Flask to predict the probability of heart disease based on patient clinical data
- Engineered a full-stack pipeline: trained and serialized a Random Forest classifier (scikit-learn) on a medical dataset, built a RESTful backend with Flask, and designed an interactive front-end with HTML, CSS, and Bootstrap.
- Achieved model accuracy of more than 85% and successfully deployed the application, demonstrating skills in model production and web development.

Sentiment Analysis Application
Machine Learning

June 2025 – July 2025

- Designed an end-to-end NLP pipeline in Python using NLTK, including text cleaning, normalization, tokenization, stop-word removal, and lemmatization to classify text sentiment.
- Integrated Bag-of-Words and TF-IDF vectorization techniques to transform processed text into numerical features and trained a Logistic Regression classifier using Scikit-learn.
- Structured the pipeline to separate pre-processing, vectorization, model training, and prediction stages, ensuring modularity and consistent inference.

Hospital Management System
Software Development

July 2024 – August 2024

- Developed a Python-based desktop application using Tkinter to manage hospital and patient records, supporting structured user interfaces and validated data input.
- Integrated Python with MySQL to execute SQL queries and implement end-to-end CRUD operations for reliable data storage and retrieval.
- Designed a modular application architecture that separates user interface logic, database operations, and core workflows to improve maintainability.

EXPERIENCE

Software Engineering Intern (AI/ML)
IBM India Pvt. Ltd.

May 2025 – July 2025

- Applied supervised machine learning workflows using Python and Scikit-learn, contributing to model development, training, and evaluation tasks.
- Performed data pre-processing, data preparation and model validation to prepare structured datasets, ensuring data quality and compatibility for model training.
- Implemented and validated model training pipelines using standard evaluation techniques and defined technical guidelines.

CERTIFICATIONS

- Claude 101**(Anthropic)
- MongoDB Developer’s Toolkit – CRUD Mastery** (GeeksforGeeks)
- AI & ML Virtual Internship Certification** (IBM India Pvt. Ltd.)
- Python Programming Certification** (GUVI – HCL Collaboration)

EDUCATION

Dr. APJ Abdul Kalam Technical University | Bachelor of Technology
Computer Science & Engineering

2022 – 2026
